Faster than waxing...

Frequently Asked Questions

How it Works?

Allegro Super Fast Motion Technology combines low fluence super fast pulses to target and destroy the hair follicles responsible for hair growth, without harming surrounding tissue.

The 'sweeping technique' allows for continuous motion movement and cooling resulting in a faster treatment time with less pain and discomfort. This is in contrast to previous technology which caused peak energies and required cooling prior to the treatment in order to reduce adverse side effects.

Allegro advanced skin cooling system comes from the Sapphire Tip on the handpiece combined with a special in-built freezing/refridgeration system. The benefits of a Sapphire Tip increases patient comfort, virtually eliminating any pain.

Am I Suitable for this Treatment?

Allegro Super Fast Permanent Hair Reduction is suitable for all skin types and most hair colours.

What Areas can be Treated?

The **Allegro** can treat and remove unwanted hair from any part of the face (except around the eyes) and the body (back, chest, bikini, underarms, arms, legs).

How Many Sessions Do I Need?

Several treatment sessions are recommended (average 6-8) for desired aesthetic outcome. Permanent hair reduction can only affect hair in active stages of growth which is averaged at 20% of hair removed at a time per area.

Does it Give Permanent Results?

It will give you *permanent hair reduction!* Most hair will not grow back at all whilst other hair may grow back thinner and lighter. You will wonder why you waited so long!

What will Treatment Feel Like?

For most people there is *no pain.* The feeling of the treatment varies from person to person, depending on concentration of melanin in treated area, also, size and density of hair.

What can I Expect After Treatment?

Most people experience no noticeable difference and can return immediately after treatment. Some people experience a mild redness that will subside within a few hours.

Are There Any Side Effects?

No. There are no adverse side effects. Your treatment provider will discuss any necessary pre and post treatment care before the procedure.
