OUR TECHNOLOGY
YOUR TRANSFORMATION

REAL-LIFE RESULTS

Microchanneling will keep your skin looking and feeling younger by activating your body's natural regenerative ability to help tighten and lift skin, while minimizing many common skin problems.

Microchanneling stimulates your body's natural ability to generate new healthy skin rather than utilizing destructive and inflammatory techniques like many treatments in the aesthetic industry. This results in a more enjoyable treatment, virtually non-existent downtime, and happier skin. Microchanneling can also improve the overall health of your skin by stimulating the rejuvenation cascade for new collagen production.

MICROCHANNELING TURNS IT ON!

Improves the appearance of:

- Fine Lines and Wrinkles
- Acne Scars / Surgical Scars
- Stretch Marks
- Sun Damage / Dark Spots
- Hyperpigmentation
- Firms, Tightens & Tones Skin
- Virtually NO Downtime

You age, visibly and invisibly, every day. Sun damage, internal inflammation, chemicals, and even gravity all work against the youthful vitality of your skin. As we get older, our ability to repair this constant damage diminishes dramatically. Since fewer regenerative stem cells survive to carry on the work, slower, less robust healing and greater levels of inflammation are inevitable, resulting in skin blemishes that become more and more pronounced as you age.

HUMAN GROWTH FACTORS APPLIED TO THE SKIN MIMIC THE EFFECT OF HAVING MORE YOUTHFUL STEM CELLS!

ProCell serums contain growth factors derived from human bone marrow, which produce a potent, anti-inflammatory effect. This effectively reduces healing time, and can help improve the appearance of hyperpigmentation and scar tissue deposition. These growth factors support cellular renewal and have strong regenerating properties to improve skin firmness, elasticity, texture, and tone. This can diminish the prominence of scarring, fine lines, and wrinkles, leaving the skin looking and feeling bright and healthy.
